This sequence was determined by the E. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently determined from E. coli K12 strain MG1655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 3032 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web Site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4089
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4029

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase by assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /codon_start=1

Salmonella; agfA; chromosomal gene replacement; fimbrin; epitope; vaccine; immune response; immunogen; ds.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

CC back into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (1) is CC polymer into the expression of recombinant AgfA protein for the expression of recombinant AgfA protein for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for CC system the heterologous antigens are presented in high numbers (up to conjunctive, the heterologous antigens are presented in high numbers (up to vaccine, the carrier fimbrial subunit protein sere usually strong CC immunogenicity and adhesion properties relevant for an efficient live communogens, which may be important for directing an immune response cc inexpensive to purify in large amount. The present sequence is given in XX the exemplification of the present invention

The DNA and isolated proteins are used in genetic immunization and vaccine compositions, respectively, to elicit an immune response to Salmonella in animals (e.food producing animals) and humans. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide proteins ento roused to provide proteins to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
       CC The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant on a recombination of a recombinant gene contained the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising asperating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the CC useful for the animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant. TafA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation on System the heterologous antigens are presented in high numbers (up to companioty and adhesion properties relevant for an efficient live
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant agfA gene having a segment replaced by a foreign DNA seq which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2000-672631/65.

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 137; 139pp; English.

CC Regment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SER17/TAF) nucleation depended CC assembly system of strains of Salmonella, Bacherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) cc homologous species; (3) directing recombinant gene into the chromosome of the back into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal, cc protein containing a replacement segment or segments of foreign amino acid polymer comprising a recombinant epine comprising separating an amino acid polymer comprising a recombinant coli acid sequence or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (1) is certain for the expression of recombinant AgfA protein which is useful for South and adhesion properties are presented in high numbers (up to comprisine the heterologous antigens are presented in high numbers (up to comprise the laterologous antigens are presented in high numbers (up to comprise the heterologous antigens are presented in high numbers (up to compresent the laterologous antigens are presented in high numbers (up to compresent the inserted epitope, and hybrid fimbrin are usually strong compressive to purify in large amount. The present sequence is given in the exemplification of the present invention

Sequence 456 BP; 116 A; 111 C; 120 G; 109 T; 0 U; 0 Other;

assembly system of strains of Salmonella, Escherichia coli and
Enterobacteriaceae for the production of fimbriae comprising recombinant
Agfa, CsgA and Agfa-homologue fimbrin subunits, respectively; (2)
Cdirecting recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombinant gene into the chromosome of the
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant Agfa
CC comprising separating an amino acid polymer comprising a recombinant Agfa
CC comprising separating an emino acid polymer comprising a recombinant Agfa
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC useful for the expression of recombinant Agfa protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CS 100,000 copies/cell), the hybrid fimbrial subunit protein possesses both the
CC vaccine, the carrier fimbrial subunit protein are usually strong

                                                                                                                                                                                                                                                                                                                                                                                                                 CC AgfA, CsgA and AgfA-homologue fimbrin subunite, respectively; (2) directing recombination of a recombinant gene into the chromosome of the CC homologous species; (3) directing recombinant gene into the chromosome of the CC back into the chromosome of the homologue species, replacing the native comprising separating an amino acid polymer comprising a recombinant AgfA (2) eliciting an immune response in an animal, CC protein containing a replacement segment or segments of foreign amino acid polymer comprising a recombinant AgfA (2) eliciting an immune response in an animal, CC acid sequence or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (1) is CC eliciting an immune response in an animal. In a fimbrial presentation or Sol,000 copies/cell), the hybrid fimbrin protein which is useful for Sol,000 copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit proteins are usually strong companies the inserted epitope, and hybrid fimbriae are usually strong consensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                             Matches 393;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:

(I) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant and the production of strains of Salmonella.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 138; 139pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ঠ
           The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene homologous species; (3) directing recombination of a recombination of a recombination the chromosome of the homologous species; (3) directing species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal,
                                                                                                                                                                                                                            Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                         White AP,

(I) is useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and cinexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

CC Regment of the gene has been replaced by a segment of a foreign DNA CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation described are: (2) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) CC homologous species; (3) directing recombinant gene into the chromosome of the homologous species, (3) directing a recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is CC eliciting an immune response in an animal. In a fimbrial presentation celicity and adhesion properties replacement suseful for celiciting an immune response in an animal. In a fimbrial presentation conjunction, the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation conjunction, the expression of properties relevant for an efficient live immunogenicity and adhesion properties relevant for an efficient live immunogenicity and be immortant for directing an enuminal strong cimmunogens, which may be immortant for directing an enuminal strong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 11

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 137; 139pp; English.

The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF1/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene CC composes species; (3) directing recombination of a recombinant gene CC composes pecies; (3) directing an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA comprising separating an amino acid polymer comprising a recombinant AgfA composition or the containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC Enterobacteriaceae host cell, from the host cell and introducing the useful for the expression of recombinant AgfA protein which is useful for polymer into the animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live capainst the inserted epitope, and hybrid fimbriae are usually strong communogens, which may be important for directing an immune response constitute of the present of the present sequence is given in the exemplification of the present invention

                                                                                                                                                                                                 The present invention describes a recombinant agfA gene (I) where a CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the CC homologous species; (3) directing recombination of a recombination of a recombinant gene CC comprising separating an amino acid polymer comprising a recombinant AgfA CC acid sequence or sequences grown on a Salmonella, E coli or CC polymer into the animal in conjunction with a carrier or diluent. (1) is CC eliciting an immune response in an animal for CC system the heterologous antigens are presented in high numbers (up to immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong cagainst the inserted epitope, and hybrid fimbriae are easy and che exemplification of the present invention of the present sequence is given in a simular response.
                                                                               Matches 389;

The DNA and isolated proteins are used in genetic immunization and vaccine compositions, respectively, to elicit immune response to Salmonella in animals (e.g. food producing animals) and humans. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 9% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      primer_bind

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NO 13717
SEQ ID NO 13717
SEQ ID NO 13717
TYPE: DNA
COGANISM: Pseudomonas aeruginosa
